

# Princeton Payment Solutions Named Finalists in Info Security Products Guide's Global Excellence Awards

## Winners Will Be Honored in San Francisco on February 29, 2012

Princeton, NJ – December 2011/January 2012

Princeton Payment Solutions announced today that Info Security Products Guide, the industry's leading information security research and advisory guide, has named the PANPAD, a finalist for the 2012 Global Excellence Awards in the New Product Launch category. These prestigious global awards recognize security and IT vendors with advanced, ground-breaking products and solutions that are helping set the bar higher for others in all areas of technologies.

The Princeton Payment Solutions PANPAD is a card entry device that takes your order entry workstations out of PCI scope. A number of currently available solutions use tokenization to remove most of your IT infrastructure from PCI scope, but order entry terminals have always been a concern. Payment card numbers must be typed directly into the terminals, keeping them in scope.

“We are proud to be recognized as an industry player whose named PANPAD has been named finalist by Info Security Products Guide,” says Alex Chapman, Director, Princeton Payment Solutions. “Behind this distinguished success is our relentless drive to stay customer focused. We believe this recognition from Info Security Products Guide further validates our commitment to our customers and their security needs.”

## About Info Security Products Guide Awards

Info Security Products Guide sponsors leading conferences and expos worldwide and plays a vital role in keeping end-users informed of the choices they can make when it comes to protecting their digital resources. most pertinent security decisions. The Info Security Products Guide Awards recognize and honor excellence in all areas of information security. To learn more, visit [www.infosecurityproductsguide.com](http://www.infosecurityproductsguide.com) and stay secured.

### **About Princeton Payment Solutions**

In 2003, the Princeton Payments Solution group was formed to address the specific needs of the ERP Community with respect to complex payment environments.

CardConnect is PPS's latest card payment interface, building on over a decade of experience connecting the ERP community with the banking community. In 2004, PPS was the first company to encrypt data within an ERP system and pass the PCI audit standards with our CardSecure solution. Subsequently, responding to customer requests to remove SAP from PCI scope, and to address growing security concerns about personal information, PPS developed CardSecure's token solution. PPS clients include General Electric, Adobe, Brother, and Becton-Dickinson.
